## ABSTRACT

Swetnam, D.A.B. and S.F. O'Neil. 1985. Collation of Atlantic salmon sport catch statistics, Maritime Provinces, 1960-69. Can. Data Rep. Fish. Aquat. Sci. No. 533. ix + 289 p.

The progressive decline of Canadian east-coast Atlantic salmon stocks has generated a need for more accurate and concise catch and effort information. This need has prompted the production of this report, covering the period 1960-69, which is the third in a series of four reports detailing Atlantic salmon angling data on Maritime rivers. One subsequent report will cover the data from 1951 to 1959.

The data used were collected by conservation and protection officers of the Department of Fisheries and Oceans.

Numbers and weights of fish angled, as well as numbers of rod-days expended, are included for kelts and bright fish, broken down by grilse and large salmon for individual rivers, river systems, statistical districts, counties, salmon management zones, provinces, regions, NAFO divisions and the Maritimes as a whole.

Key words: Atlantic salmon (Salmo salar), sport fishing, rod-days, kelts, grilse, salmon management zones, statistical districts, Maritimes.

## RÉSUMÉ

Swetnam, D.A.B. and S.F. O'Neil. 1985. Collation of Atlantic salmon sport catch statistics, Maritime Provinces, 1960-69. Can. Data Rep. Fish. Aquat. Sci. No. 533. ix + 289 p.

L'épuisement progressif des stocks de saumon atlantique sur la côte est du Canada a donné naissance à un besoin de renseignements concis et plus précis sur les prises et l'effort de pêche, d'où l'idée de produire le présent rapport pour les années 1960-1969. C'est le troisième d'une série de quatre rapports détaillés sur la pêche au saumon atlantique dans les cours d'eau des provinces Maritimes. Les données concernant les années 1951-1959 seront fournies dans un rapport subséquent.

Les données utilisées ont été recueillies par les agents de conservation et de protection du ministère des Pêches et Océans.

Le nombre et le poids des poissons capturés ainsi que le nombre de jours consacrés à la pêche y sont inclus pour ce qui est des charognards et des poissons brillants, de même que la répartition des grilse et des saumons pour chaque flueve, réseau fluvial, division statistique, comté, zone d'exploitation du saumon, province, région, division de l'OPNA et l'ensemble des Maritimes.

The data were

rity of the data, the variance  
employed in its collection  
suggests that "approximate"  
describe their accuracy as  
officers were occasionally  
only a short one- to three-  
location, so may have been unfamiliar  
the Atlantic salmon sport fishery  
they were reporting. The techniques  
for data collection varied, depending  
area, budgetary and manpower constraints  
officer priorities. Some of the techniques  
used were camp and Crown Reserve  
records, word-of-mouth reports, contact with  
anglers and arms-length estimates based on a  
officer's personal knowledge of the fishery.  
Nevertheless, the data will approximate  
actual catch and effort and the trends should  
be indicative of fluctuations in availability  
of fish to the angler and in effort expended  
between years and rivers.

Data in this report have been carefully  
compared with previous summaries and any  
discrepancies checked with the original  
source. Consequently, information in the  
current report should be considered the most  
up-to-date.

The statistical portion of this report  
is divided into nine sections, each a  
separate type of breakdown or summary of  
angling data on the various rivers as  
follows: Section 1 - Individual rivers,  
listed alphabetically with map index number;  
Section 2 - "River systems," which include  
condensed data for six river systems; Section  
3 - Statistical districts; Section 4 -  
Counties by province; Section 5 - Salmon  
Management Zones; Section 6 - Provinces;  
Section 7 - Scotia-Fundy Region and the  
Maritime Provinces portion of the Gulf  
Region; Section 8 - NAFO subdivisions; and  
Section 9 - The Maritime Provinces as a  
whole.

In each case, the data which are  
presented include: the numbers and weights  
of kelt and bright large salmon and grilse  
by month for each year; effort in rod-days;  
and the catch per unit of effort (CPUE), or  
number of fish per rod-day. A kelt is a

month within one of the summary groups  
catch data are given but no rod-days are  
available, then NA is printed for that  
month and no yearly total given.

Due to inconsistent reporting over the decade covered, the data from some river tributaries and nearby streams were combined into one watercourse. The Salmon and Gaspereau rivers in Cape Breton county were added to the Mira river; Little River, Gloucester County, was combined with the Middle River, Gloucester County; and the Gaspereau River in Westmorland County includes the Baie Vert and Timber rivers. In 1966, the data for the Kouchibouguac River includes that from the Kouchibouguacis. Cheticamp River data were provided only as yearly summaries, and broken down by month according to the monthly means of data from 1974 through 1983.

An annual summary of catch and effort, by river, without the monthly breakdown, was previously published for the years 1951-79 (Smith 1981).
